«SUPERCOOL» > This fixture by Horst Wittmann and Konstantin Landuris represents the typology of a luminaire integrated in the architectural context. As such, the Supercool occupies minimal space. Positioned close to a wall, it uses the wall surface as an additional reflector. The Supercool is fitted with High Power LEDs; the necessary cooling element is incorporated in the structure of the shade. The telescopic, height adjustable stem expands between floor and ceiling and can be transformed in multiple ways. You can slide the light head up and down to the desired height, and flip the reflector 360°. Changing the angle of light allows changing both its functional purpose and the overall lighting mood_ WWW.HANSANDFRANZ.COM
